

# Teleporte

## Success Story

Learn how a large logistics company based in Argentina made their operations more efficient and cost-effective with Teleporte.

Sera4's keyless access control platform, Teleporte, makes it easy for a logistics operation to issue and manage users and digital credentials across their fleet.

USS Flotas' retail client has installed Teleporte in over 30 access points in the last year. The organization credits Teleporte with a significant improvement of asset security across the logistics operation.

Argentina-based USS Flotas (USS Cargo) manages security for a large fleet of merchandise delivery trucks on behalf of a retail company. The fleet operates across a number of inter-municipality delivery routes, and USS Flotas was seeking a solution to solve its most pressing problem: securing cash safes within merchandise delivery vehicles as they move across the logistics network.

USS Flotas is the official integrator of innovative security and technology solutions for Argentina's leading brands. USS Flotas is a division of USS Seguridad Integral. With 25 years of experience in the market, USS Seguridad which focuses on implementing and managing highly efficient, comprehensive security solutions across a variety of industries, including security and satellite fleet monitoring for logistics and transportation companies.

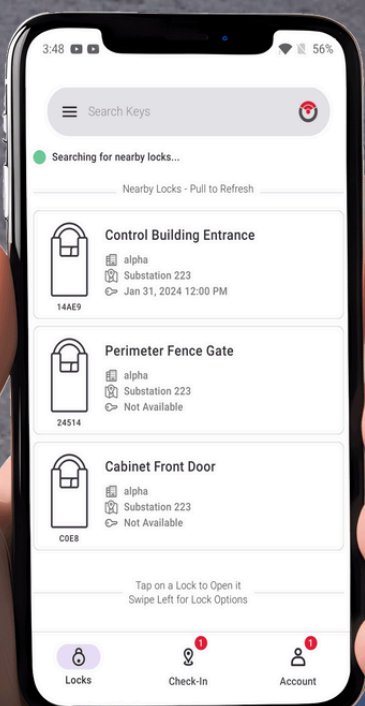

USS Flotas worked with a Sera4 Authorized Distributor in Argentina, ABEI, which has extensive experience with bringing keyless access control solutions to leading companies in Argentina. As a trusted partner, ABEI offers support and recommendations for companies, including retail stores nationwide, who are looking to increase their profitability by implementing Teleporte..

### SECURE / SCALABLE / RELIABLE

USS Flotas highlights Teleporte's reliable platform and robust armored padlocks as key benefits for improving security and gaining insights across its logistics network.

Alejandro Romano, Fleet Business Unit Manager at USS Seguridad Argentina, notes that *"Teleporte has significantly improved asset security."* The full audit trail generated by Teleporte, which provides real-time information on when, where, and how assets are being accessed, and by whom, is key to securing assets across the logistics chain, including doors, cabinets, trucks, safes and containers.

The client has been able to take control of its assets, wherever they are across their network, through the generation and management of over 2,000 digital keys. Teleporte's digital credentials are authenticated to a specific user and device, which removes anonymity and helps the client mitigate vandalism and theft across its operation.

*"The Teleporte solution is the most complete on the market in terms of reliability of use and strength of its construction."*

- Alejandro Romano, Fleet Business Unit Manager  
USS Seguridad

### Conclusion

Sera4 keyless access is a smart and innovative solution for securing and controlling access. At the same time, it helps transport companies secure assets and reduce the incidence of human or illegal goods smuggling and theft.
